

CLASS A • 66537X514 • ASTLX

CLASS C • 66537V641 • ASTZX

CLASS I • 66537V732 • ASTIX

Astor's flagship strategy takes a macroeconomics-based approach to asset allocation using the proprietary Astor Economic Index® (AEI).

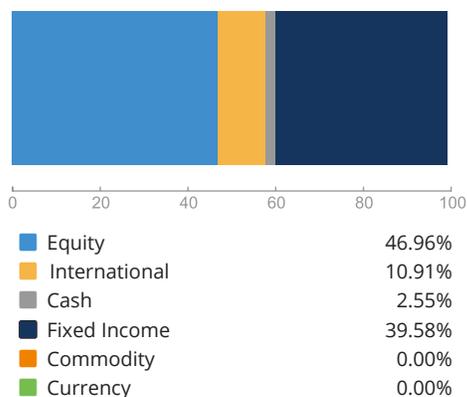

- Pursues the ability to offer downside protection, strategically reducing risk as the economy weakens in order to minimize portfolio exposure to potentially wealth-destroying events
- Seeks to produce more favorable risk-adjusted returns (higher average return and lower volatility) than broad equity and alternative benchmarks
- Attempts to produce smoother returns by increasing allocations to more stock (risk assets) when you want them during times of economic strength and adjust to more fixed income (low risk assets) when you need them during periods of economic weakness

**EXHIBIT 1: 4 STAR OVERALL MORNINGSTAR RATING™**

The Fund's Class I shares received 4-star Morningstar Ratings™ as of 06/30/19 among 230 and 178 funds in the Tactical Allocation category based on risk-adjusted performance for the 3 and 5-yr periods, respectively, ending 06/30/19.

Net expense fees above reflect that the Adviser has contractually agreed to waive its management fees and to make payments to limit Fund expenses, until November 30, 2019 so that the total annual operating expenses, including (i) any front-end or contingent deferred loads; (ii) brokerage fees and commissions; (iii) acquired fund fees and expenses; (iv) fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example options and swap fees and expenses); (v) borrowing costs (such as interest and dividend expense on securities sold short); (vi) taxes; and (vii) extraordinary expenses, such as litigation expenses (which may include indemnification of Fund officers and Trustees, contractual indemnification of Fund service providers (other than the Adviser) of the Fund do not exceed 1.40%, 2.15% and 1.15% for Class A, Class C and Class I shares, respectively.

**Fund Holdings Information:** The presented holdings are calculated as a percentage of total assets. The top holdings, industry sectors, and asset allocation are presented to illustrate examples of the securities the Fund has bought and the diversity of areas in which the Funds may invest, and may not be representative of the Fund's current or future investment. The top holdings do not include cash or cash equivalents. Asset class percentages are rounded. As such, actual position weights may vary and/or the sum total may not equal 100%. **Benchmark Information:** The benchmark is the HFRI Macro (Total) Index. The index performance is rebalanced monthly and calculated net of all fees. The HFRI Macro (Total) Index is an unmanaged, equal-weighted composite of funds listed in the HFR Database having either \$50 million or greater in assets or a 12-month track record. HFRI is a registered trademark of Hedge Fund Research, Inc. An investment cannot be made directly into an index.

**The Astor Economic Index®** is a proprietary index created by Astor Investment Management LLC. It represents an aggregation of various economic data points, including output and employment indicators. The Astor Economic Index® is designed to track the varying levels of growth within the U.S. economy by analyzing current trends against historical data. The Astor Economic Index® is not an investable product. When investing, there are multiple factors to consider. The Astor Economic Index® should not be used as the sole determining factor for your investment decisions. The Index is based on retroactive data points and may be subject to hindsight bias. There is no guarantee the Index will produce the same results in the future. The Astor Economic Index® is a tool created and used by Astor. All conclusions are those of Astor and are subject to change.

Mutual funds involve risk including the possible loss of principal.

The Fund seeks to achieve its objectives by investing in Exchange-Traded Funds ("ETFs"). An ETF is a type of Investment Company which attempts to achieve a return similar to a set benchmark or index. The value of an ETF is dependent on the value of the underlying assets held. ETFs are subject to investment advisory and other expenses which results in a layering of fees for clients. As a result, your cost of investing in the fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds with similar investment objectives. ETFs may trade for less than their net asset value. Although ETFs are exchanged traded, a lack of demand can prevent daily pricing and liquidity from being available.

The Fund can purchase ETFs with exposure to equities, fixed income, commodities, currencies, developed/emerging international markets, real estate, and specific sectors. The underlying investments of these ETFs will have different risks. Equity prices can fluctuate for a variety of reasons including market sentiment and economic conditions. The prices of small and mid-cap companies tend to be more volatile than those of larger, more established companies. It is important to note that bond prices move inversely with interest rates and fixed income ETFs can experience negative performance in a period of rising interest rates. High yield bonds are subject to higher risk of principal loss due to an increased chance of default. Commodity ETFs generally gain exposure through the use of futures which can have a substantial risk of loss due to leverage. Currencies can fluctuate with changing monetary policies, economic conditions, and other factors. International markets have risks due to currency valuations and political or economic events. Emerging markets typically have more risk than developed markets. Real estate investments can experience losses due to lower property prices, changes in interest rates, economic conditions, and other factors. Investments in specific sectors can experience greater levels of volatility than broad-based investments due to their more narrow focus.

The Fund can also purchase unleveraged, inverse fixed income and equity ETFs. Inverse ETFs attempt to profit from the decline of an asset or asset class by seeking to track the opposite performance of the underlying benchmark or index. Inverse products attempt to achieve their stated objectives on a daily basis and can face additional risks due to this fact. The effect of compounding over a long period can cause a large dispersion between the ETF and the underlying benchmark or index. Inverse ETFs may lose money even when the benchmark or index performs as desired. Inverse ETFs have potential for significant loss and may not be suitable for all investors.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics.
