CLASS I • 66537V732 • ASTIX

Astor's flagship strategy takes a macroeconomics-based approach to asset allocation using the proprietary Astor Economic Index® (AEI).

- Pursues the ability to offer risk mitigation by strategically reducing risk as the economy weakens in order to minimize portfolio exposure to potentially wealth-destroying events.
- Seeks total return through a combination of capital appreciation and income.
- Attempts to produce more favorable risk-adjusted returns (higher average return and lower volatility) than broad equity and alternative benchmarks by increasing allocations to risk assets during times of economic strength and replacing risk assets with defensive positions such as fixed income during periods of economic weakness.

3 STAR OVERALL MORNINGSTAR RATING™

The Fund's Class I shares received a 3-Star Overall Morningstar Rating™ as of 6/30/23 among 228 funds in the Tactical Allocation category based on risk-adjusted performance.

*Net expense fees above reflect that the Adviser has contractually agreed to waive its management fees and to make payments to limit Fund expenses, until November 30, 2023 so that the total annual operating expenses, including (i) any front-end or contingent deferred loads; (ii) brokerage fees and commissions; (iii) acquired fund fees and expenses; (iv) fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example options and swap fees and expenses); (v) borrowing costs (such as interest and dividend expense on securities sold short); (vi) taxes; and (vii) extraordinary expenses, such as litigation expenses (which may include indemnification of Fund officers and Trustees, contractual indemnification of Fund service providers (other than the Adviser) of the Fund do not exceed 1.40%, 2.15% and 1.15% for Class A, Class C and Class I shares, respectively.

Fund Holdings Information: The presented holdings are calculated as a percentage of total assets. The top holdings, industry sectors, and asset allocation are presented to illustrate examples of the securities the Fund has bought and the diversity of areas in which the Funds may invest, and may not be representative of the Fund's current or future investments. Position weights and asset class percentages may not sum to 100% due to rounding.

Benchmark Information: The benchmark is the S&P 500 Index. Presented returns assume the reinvestment of dividends. The S&P 500 Index is an unmanaged composite of 500 large capitalization companies. S&P 500 is a registered trademark of McGraw-Hill, Inc. **60% S&P 500/40% Bloomberg U.S. Aggregate Bond Index:** A custom benchmark consisting of the summed returns of 60% of the S&P 500 Total Return Index and 40% of the Bloomberg U.S. Aggregate Bond Index on a monthly basis. Index returns are calculated with dividends reinvested. This custom benchmark is often used for comparison purposes as it represents a "balanced" portfolio of equities and fixed income.

The Astor Economic Index® is a proprietary index created by Astor Investment Management LLC. It represents an aggregation of various economic data points, including output and employment indicators. The Astor Economic Index® is designed to track the varying levels of growth within the U.S. economy by analyzing current trends against historical data. The Astor Economic Index® is not an investable product. When investing, there are multiple factors to consider. The Astor Economic Index® should not be used as the sole determining factor for your investment decisions. The Index is based on retroactive data points and may be subject to hindsight bias. There is no guarantee the Index will produce the same results in the future. The Astor Economic Index® is a tool created and used by Astor. All conclusions are those of Astor and are subject to change.

Important Risk Information

Mutual funds involve risk including the possible loss of principal. The Fund seeks to achieve its objectives by investing in Exchange-Traded Funds ("ETFs"). An ETF is a type of Investment Company which attempts to achieve a return similar to a set benchmark or index. The value of an ETF is dependent on the value of the underlying assets held. ETFs are subject to investment advisory and other expenses which results in a layering of fees for clients. As a result, your cost of investing in the fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds with similar investment objectives. ETFs may trade for less than their net asset value. Although ETFs are exchanged traded, a lack of demand can prevent daily pricing and liquidity from being available.

The Fund can purchase ETFs with exposure to equities, fixed income, commodities, currencies, developed/emerging international markets, real estate, and specific sectors. The underlying investments of these ETFs will have different risks. Equity prices can fluctuate for a variety of reasons including market sentiment and economic conditions. The prices of small and mid-cap companies tend to be more volatile than those of larger, more established companies. It is important to note that bond prices move inversely with interest rates and fixed income ETFs can experience negative performance in a period of rising interest rates. High yield bonds are subject to higher risk of principal loss due to an increased chance of default. Commodity ETFs generally gain exposure through the use of futures which can have a substantial risk of loss due to leverage. Currencies can fluctuate with changing monetary policies, economic conditions, and other factors. International markets have risks due to currency valuations and political or economic events. Emerging markets typically have more risk than developed markets. Real estate investments can experience losses due to lower property prices, changes in interest rates, economic conditions, and other factors. Investments in specific sectors can experience greater levels of volatility than broad-based investments due to their more narrow focus.

The Fund can also purchase unleveraged, inverse fixed income and equity ETFs. Inverse ETFs attempt to profit from the decline of an asset or asset class by seeking to track the opposite performance of the underlying benchmark or index. Inverse products attempt to achieve their stated objectives on a daily basis and can face additional risks due to this fact. The effect of compounding over a long period can cause a large dispersion between the ETF and the underlying benchmark or index. Inverse ETFs may lose money even when the benchmark or index performs as desired. Inverse ETFs have potential for significant loss and may not be suitable for all investors.

The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the

next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The Astor Dynamic Allocation Fund, Class I (ASTIX) was rated against the following numbers of Tactical Allocation category funds over the following time periods: 3 stars out of 228 for 3 year, 3 stars out of 214 for 5 year, 3 stars out of 132 for 10 year. Past performance is no guarantee of future results.

MSCI ESG Research LLC's ("MSCI ESG") Fund Metrics products (the "Information") provide environmental, social and governance data. MSCI ESG is a Registered Investment Adviser under the Investment Adviser Act of 1940. MSCI ESG Information has not been submitted to, nor received approval from, the US SEC or any other regulatory body. None of the Information constitutes an offer to buy or sell, or a promotion or recommendation of, any security, financial instrument or product or trading strategy, nor should it be taken as an indication or guarantee of any future performance, analysis, forecast, or prediction. None of the Information can be used to determine which securities to buy or sell or when to buy or sell them. The information is provided "as is" (without any warranties) and the user of the Information assumes the entire risk of any use it may make or permit to be made of the Information. MSCI ESG shall incur no liability for any errors or omissions in the Information, nor for any damages related thereto.

27% of the fund's holdings receive an MSCI ESG Rating of AAA or AA (ESG Leaders) and 1% receive an MSCI ESG Rating of B or CCC (ESG Laggards). The fund ranks in the 54th percentile within the Mixed Asset USD Flex - US peer group and in the 50th percentile within the global universe of approximately 34,000 funds in coverage.

MSCI ESG Fund Ratings aim to measure the resilience of mutual funds and ETFs to financially material environmental, societal and governance (ESG) risks. Our ESG ratings provide a window into one facet of risk to financial performance. MSCI ESG Fund Ratings are designed to measure the Environmental, Social and Governance (ESG) characteristics of a fund's underlying holdings, making it possible to rank or screen mutual funds and ETFs from leader (AAA, AA), average (A, BBB, BB) to laggard (B, CCC). We leverage MSCI ESG Ratings for over 8,500 companies (approximately 14,000 total issuers including subsidiaries) and more than 680,000 equity and fixed income securities globally to create ESG scores and metrics for approximately 53,000 multi-asset class Mutual Funds and ETFs globally.

Each fund or ETF scores a rating on a scale from CCC (laggard) to AAA (leader). The rating is based first on the weighted average score of the holdings of the fund or ETF. We then assess ESG momentum to gain insight into the fund's ESG track record, which is designed to indicate a fund's exposure to holdings with a positive rating trend or worsening trend year over year. Finally, we review the ESG tail risk to understand the fund's exposure to holdings with worst-of-class ESG Ratings of B and CCC.
