

FUND PERFORMANCE

- The Fund performance in December was up +2.31% trailing the S&P 500, which returned +4.54%
- For the 12 months ending in December 2023, the Fund was up +1.12%
- This compares to the S&P 500, which returned +26.29% over the same time frame.

CURRENT THEMES

- Neutral international government bonds, from slightly long last month
- Short commodity futures, less short than last month
- Short foreign currencies (long U.S. dollar) from neutral last month
- Long short term interest rate futures
- Very small U.S. and EM equity positions
- Little equity market hedging in December

The performance data quoted here represents past performance. Current performance may be lower or higher than the performance data quoted above. Investment return and principal value will fluctuate, so that shares, when redeemed, may be worth more or less than their original cost. Past performance is no guarantee of future results. The Fund's investment adviser has contractually agreed to reduce its fees and/or absorb expenses of the Fund, at least until November 30, 2024. Total annual fund operating expenses after fee waiver are 2.09%, and 1.84%, for Class A and Class I shares, respectively. Without the waiver, total annual operating expenses would be 2.96% and 2.71% for Class A and Class I shares, respectively. For performance information current to the most recent month end, please call toll-free 877.738.0333 or visit astorimfunds.com

UNDERLYING STRATEGY COMMENTARY

There are three strategies within GBLMX. Each strategy accesses different markets and has its own, separate investment discipline:

- Global Asset Allocation (GAA):** Our ETFs were profitable in December though they trailed the broad equity and fixed income indexes. Our long duration position did the best while CTA exposure was a loser.

- Short-Term Hedge:** Our short term trading in government bond futures was profitable in December and our short term trading in commodity futures was neutral. We had 3% equity market hedging in December. Below is the average of the last 12 month.

- Futures Trading Strategy:** Our futures trading was profitable in December. Our energy positions in particular had a good month. Our currency trading, where we were long U.S. dollar, was a drag on performance last month in month emerging and developed market currencies.

Source: Astor, Data: 12/31/23. The exposure ranges shown represent the minimum and maximum percentage to be invested in each asset class based on the strategy model. The exact percentage may fluctuate due to market movement in held securities and the portfolio managers may make adjustments to thresholds based on research and discretion. Current allocation percentages represent net figures of long and short positions. The Fund may execute portions of its investment strategy, by investing up to 25% of its total assets (measured at the time of purchase) in a wholly-owned and controlled Subsidiary. The Subsidiary will invest primarily in futures contracts. The charts are not a presentation of performance achieved by the Fund.

The Astor Macro Alternative Fund (I-Share: GBLMX) seeks to provide positive returns over a market cycle regardless of market conditions or general market direction.

DISCLOSURES

Past performance is no guarantee of future results.

Drawdown is the peak-to-trough decline during a specific recorded period of an investment, fund or commodity. **Hedge** is making an investment to reduce the risk of adverse price movements in an asset. Normally, a hedge consists of taking an offsetting position in a related security, such as a futures contract. **Nasdaq** is an investment in an exchange-traded fund that invests primarily in the shares of publicly-traded companies within the Nasdaq Composite Index. **Sortino Ratio** measures the risk-adjusted return of an investment asset, portfolio, or strategy. **Standard Deviation** measures the degree of variation of monthly returns around the mean (average) return. The higher the volatility of the investment returns, the higher the standard deviation.

BENCHMARK INFORMATION:

Standard & Poor's 500 Total Return Index: The S&P 500 Index measures the performance of 500 large cap stocks, which together represent approximately 80% of the total equities market in the United States. The Total Return calculation includes the price-plus-gross cash dividend return. The S&P 500 is registered trademark of McGraw Hill Financial. An investment cannot be made directly in an index.

U.S. Fund Macro Trading: Represented by the Morningstar Macro Trading fund category. Funds in this category utilize macro trading strategies, either through systematic or discretionary methods, to look for investment opportunities by studying such factors as the global economy, government policies, interest rates, inflation, and market trends. Macro trading funds are not restricted by asset class and may invest across such disparate assets as global equities, bonds, currencies, and commodities, and make extensive use of derivatives. Although these strategies aim to provide returns that are not correlated to traditional market indexes over a full market cycle, they can take significant directional long or short positions on any asset class over short periods and may have relatively high portfolio turnover.

IMPORTANT RISK INFORMATION

Mutual funds involve risk including the possible loss of principal. Past results are no guarantee of future results and no representation is made that a client will or is likely to achieve positive returns, avoid losses, or experience returns similar to those shown or experienced in the past. All information contained herein is for informational purposes only. No level of diversification or non-correlation can ensure profits or guarantee against losses.

The Fund seeks to achieve its objectives by investing primarily in Exchange-Traded Funds ("ETFs"). An ETF is a type of Investment Company which attempts to achieve a return similar to a set benchmark or index. The value of an ETF is dependent on the value of the underlying assets held. ETFs are subject to investment advisory and other expenses which results in a layering of fees for clients. As a result, your cost of investing in the fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds with similar investment objectives. ETFs may trade for less than their net asset value. Although ETFs are exchanged traded, a lack of demand can prevent daily pricing and liquidity from being available. The Fund can purchase ETFs with exposure to equities, fixed income, commodities, currencies, developed/emerging international markets, real estate, and specific sectors. The underlying investments of these ETFs will have different risks. Equity prices can fluctuate for a variety of reasons including market sentiment and economic conditions. The prices of small and mid-cap companies tend to be more volatile than those of larger, more established companies. It is important to note that bond prices move inversely with interest rates and fixed income ETFs can experience negative performance in a period of rising interest rates. High yield bonds are subject to higher risk of principal loss due to an increased chance of default. Commodity ETFs generally gain exposure through the use of futures which can have a substantial risk of loss due to leverage. Currencies can fluctuate with changing monetary policies, economic conditions, and other factors. International markets have risks due to currency valuations and political or economic events. Emerging markets typically have more risk than developed markets. Real estate investments can experience losses due to lower property prices, changes in interest rates, economic conditions, and other factors. Investments in specific sectors can experience greater levels of volatility than broad-based investments due to their more narrow focus. The Fund can also purchase unleveraged, inverse fixed income and equity ETFs.

The Fund may execute portions of its investment strategy (e.g. commodities exposure), by investing up to 25% of its total assets (measured at the time of purchase) in a wholly-owned and controlled Subsidiary. The Subsidiary will invest primarily in futures contracts for assets such as commodities, currencies and fixed income securities. However, the Fund may also make these investments outside of the Subsidiary. The Subsidiary is subject to the same investment restrictions as the Fund, when viewed on a consolidated basis. By investing in futures contracts indirectly through the Subsidiary, the Fund will obtain exposure to financial markets such as commodities within the federal tax requirements that apply to the Fund.

The Fund may directly or indirectly invest in derivatives (including stock index, fixed income, currency and commodity futures or swaps) to enhance returns or hedge

against market declines. The Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the issuer to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities. Derivative contracts ordinarily have leverage inherent in their terms. The low margin deposits normally required in trading derivatives, including futures contracts, permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund.

An investor should consider the Astor funds' investment objectives, risks, charges, and expenses carefully before investing.
